PRMEDICA are leaders in regenerative medicine and provide the latest advances in stem cell and blood platelet procedures for treating orthopedic injuries, arthritis and other degenerative joint conditions. Our new generation stem cell therapies have also achieved significant results in treating diabetes, chronic degenerative diseases, neurological diseases, erectile dysfunction, facial rejuvenation and anti-aging procedures, and many other conditions. These non-surgical procedures offer a viable alternative to invasive surgery.

PRMEDICA are the leaders in medical tourism in Los Cabos, and welcome clients every week from abroad, particularly those from Canada and the USA for treatment at our facilities in Mexico. We make travel arrangements and book accommodations and provide local transportation to and from our medical facilities, and ensure our patients have a safe and enjoyable stay while visiting Los Cabos.
PRMEDICA FACILITIES
San José del Cabo
The Stem Cell Injection is a simple non-surgical procedure with no general anesthesia, and takes about 60 minutes. The process starts with a X-Ray image and a complete blood work to determine if the patient is a suitable candidate for Stem Cell Treatments. After a complete review of the condition, the doctor determines the amount of Stem Cells that are required to treat the patient’s condition. Stem cells and platelet-rich plasma are then injected in the joint under ultrasound guidance which allows the doctor to pinpoint with absolute precision the exact location of the injection. The doctor uses Mesenchymal stem cells from clinically approved donors and mixed with platelet-rich plasma (PRP), which is produced from the patient’s own blood. Combining PRP with stem cells will activate the movement of the stem cells towards the affected joint to promote healing and the restoration of the cartilage. After procedure, doctor recommend some exercises to strength muscles but reducing the high impact activities.
When patients have more than one affected joint, doctors recommend an intravenous systemic treatment. After establishing this condition with X-ray and blood work, the doctors inject a certain amount of Stem Cells that will be determined by the patient’s weight and the severity of their condition or degeneration degree. This procedure lasts 45 minutes without any side effects. The results in patients is improvements in their general health and well-being and actual cartilage growth in the affected areas that last from 2 and 3 years. More specific precautions will be recommended by the doctor considering the condition of the patient.
Dermiblast Plus is a single session facelift that significantly restores aging skin, resulting in a complete facial rejuvenation without surgery.

The Dermiblast Plus Facelift uses fibroblasts and mesenchymal stem cells from clinically approved donors and is mixed with platelet-rich plasma obtained from the patient’s own blood. The combination of fibroblasts, stem cells and PRP are injected into the mid-structures of the face and below the skin surface with a micro-needling device. This achieves a diffused infusion of concentrated platelet growth factors, fibroblasts and mesenchymal stem cells throughout the dermis of the face. After this, a specially prepared Bio-Filler of concentrated platelets with added hyaluronic acid is strategically placed in the smile lines, crow’s feet, chin, cheeks, forehead, and corners of the mouth using a very tiny needle.

A second application of PRP may be given 6 to 8 weeks later to stimulate the effects of the fibroblasts and stem cells to produce longer lasting results up to 24 months or more. Also included in the treatment is a facial cream containing numerous growth factors that will help maintain firmness, elasticity, and for hydration of the skin.
The implant, derived from stem cells from the placenta, is injected into the fatty tissue of the abdomen, with a tiny needle that goes just under the skin. The implant will slowly release nutrients to activate the body’s own stem cells. The release of these nutrients stimulate the body’s stem cells and will help relieve pain caused by conditions such as arthritis of the joints and enhances the healing process. The implant also provides an overall feeling of well-being.
OTHER TREATMENTS

• **IV VITAMINS**: This super-charged B vitamin cocktail will get you through your daily routine and activities, without feeling tired or have the down feeling of caffeine or energy drinks. Contains B vitamins for energy, Magnesium to regulate your bio chemical system, it will improve nerve and glucose control and prevent memory loss.

• **CHELATION**: Toxins are everywhere! Lead, mercury, and other heavy metals are part of our lives. This drip attracts and removes the conglomeration of toxins that the patient are exposed to daily. This positively affects the normal metabolism of harmful substances that otherwise would deposit on the body for long periods of time.

• **OZONE**: This systemic or local treatment involves O3 (OZONE GAS). With the correct concentration of this gas injected directly on the articulation or intravenous, is used as a pain and inflammation relieve, fibrous tissue remodeling and as an antibiotic.

• **PRP (Plasma Rich Platelets)**: this procedure has been successfully used for years to heal sports injuries, swelling, inflammation and pain. Also used as a facial treatment, to improve the appearance of wrinkles, scars, sun damage and even dark circles under eyes. It is organic, encourage a natural process and the possibility of side effects is practically nonexistent because the body is unlikely to reject its own blood.
**Dr. Víctor Rafael Ocegueda García**

Medical Surgeon – Universidad Autónoma de Nayarit

Post-Grade in emergency service

Medical instructor of the course / certification (ATLS) Advanced Trauma Life Support and (ACLS) Advanced Cardio Life support

Specialist in regenerative medicine, advanced biocell treatment by UNAM and UAG Instructor in techniques and hyperbaric handling in fixed tanks.

---

**Dra. Scarlett Galina**

Medical Surgeon - Universidad Autónoma de Guadalajara.

Certified in Renegerative Medicine - European Society of Gene and Cell Therapy - Rome, Italy

Certified in Alternative Therapies - Naturopathic Society of Catalonia - Barcelona, Spain
Dr. Héctor Cantú
Medical Surgeon - Universidad de Monterrey.
Plastic Surgeon - Universidad Nacional Autónoma de México.
Specialized on Cosmetic Surgery and Body Contour - Hospital Ángeles del Pedregal

Dra. María del Carmen Mora
Medical Surgeon – Universidad Autónoma de Guadalajara.
Medical Radiologist with a Title of Specialist in Radiodiagnosis and Image.
Medical Radiologist Certified by the Mexican Council of Radiology and Image Continuing medical update courses in General Radiology, High Specialty Ultrasound, Multidisciplinary Courses of Breast Diseases.
Member of the Society of Radiology.
Dr. Carlos Alberto Parga
Surgeon and Obstetrician
Specialty of Neurosurgery
Certified by the Mexican Board of Neurological Surgery

Luis Enrique Escobar
Licence in Pharmaceutical Chemistry and Biology – Universidad Autonoma de Sianloa
Degree in Hematology and Leukemias
Specialized on Hematology Diagnostic.
I have severe arthritis in my knees. Several years ago I had to stop playing basketball, soccer and even jogging because my knees felt weak and weren’t able to stand the impact. Last November I was in San Jose del Cabo and learned about PRMedica and Dr. Victor Ocegueda, who has been involved with stem cell therapy for many years. He examined my x-rays and my knees and it was close to being bone on bone. After procedure, my overall assessment is positive. I’m convinced my attempts to do too much too soon set back my recovery. There is no pain on my knees and I start my recovery by walking long distance and doing the exercises that Dr. Victor recommends.

Robert Genetski

---

I started with pain daily of 8+/10 being treated daily with Narcotics/Tramadol/Flexeril and Vodka, bad combination. Basically, in lower lumbar had 5 bulging discs with 2 ruptured, needing help to even dress in the morning. I have had 3 basic treatments/infusions with Stem Cells mid to end of last year. Today I am at a 1/10 with normal activities and 3/10 when I do stupid stuff like falling on my boat in Cabo back in April. Basically, take an occasional Ibuprofen as needed... when I do the above mentioned stupid stuff.

No other pain meds in over 8 months..... new way of life.

I basically intend on doing an IV infusion once a year from this point forward just for preventative care.

Hope this helps. I know everyone's results differ but, I have had a dramatic change in my life thanks to Dr. Victor Ocegueda and Barry!

Bruce Woods
PRMEDICA is associated with CryoVida, a leading human stem cell clinic in Mexico, to provide stem cells for clinical and commercial applications worldwide. CryoVida are pioneers in stem cell development and research, with more than 13 years of experience in stem cell therapy.

PRMEDICA has an association with CBCCells, a Mexican corporation in Guadalajara dedicated to stem cell research and development, with a licensed stem cell bank and fully equipped laboratory using the latest technology for the isolation and culture of adult stem cells for commercial use. CBCCells specializes in work with mesenchymal stem cells for research and development purposes, and for medical use.
